Namespace Index

1.1 Package List

Here are the packages with brief descriptions (if available):

ChessEngine	7
ChessEngine.AI	7
ChessEngine.Al.Guy	7
ChessEngine.Al.Guy.Utility	7

2 Namespace Index

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ChessAl

ChessEngine.Al.Guy.GuyChessAl	ç
ChessEngine.Al.Guy.GuyChessAl.ScoredValidMove	13
ChessEngine.Al.Guy.GuyChessAl.SubmoveEntry	13
ChessEngine.Al.Guv.GuvChessAl.ValidMoveEntry	14

4 Hierarchical Index

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

14

6 Class Index

Namespace Documentation

- 4.1 ChessEngine Namespace Reference
- 4.2 ChessEngine.Al Namespace Reference
- 4.3 ChessEngine.Al.Guy Namespace Reference

Classes

class GuyChessAl
 Guy chess Al.

4.4 ChessEngine.Al.Guy.Utility Namespace Reference

Classes

· class GuyMoveEvaluation

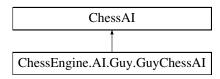

A public static class that contains values for different chess moves and pieces.

Class Documentation

5.1 ChessEngine.Al.Guy.GuyChessAl Class Reference

Guy chess Al.

Inheritance diagram for ChessEngine.Al.Guy.GuyChessAl:

Classes

· class ScoredValidMove

A scored valid move.

class SubmoveEntry

Holds information about submoves at any depth.

class ValidMoveEntry

Holds information about valid moves and attacks that may be made this turn.

Public Member Functions

• GuyChessAl (ChessColor pTeam)

The constructor for GuyChessAl.

float CalculateMoveScore (Instance pInstance, MoveData pMoveData, ref CancellationTokenSource p

 CancellationToken)

Gets the single-move score if the move described by pMoveData if played on the chess engine Instance, plnstance.

override void OnBestMoveRequestUpdate ()

Invoked after every 'OnUpdate' in any frame where 'IsBestMovePending == true' and 'IsBestMoveDelayed == false'. Logic to determine best moves should not be executed in this loop as a submission delay causes it to not be executed. It is best practice to submit ready best moves in this callback unless they were demanded, this will prevent any non-demanded submissions while there is a best move submission delay set.

override void OnBestMoveRequested (int pMaxDepth, float pMaxTime)

10 Class Documentation

Invoked when a best move is requested.

override void OnUpdate ()

Invoked every frame that the AI is updated.

override void OnBestMoveDemanded ()

Invoked after the AI demands a best move be submitted immediately.

override void OnBestMoveSubmitted (TileIndex pFrom, TileIndex pTo)

Invoked after the AI submits a best move.

Protected Member Functions

• void StopThinking ()

Forces the AI to stop thinking about a move.

void SubmitBestMove ()

Determines and submits a 'best move' instantly.

void SubmitBestMove (MoveData pMoveData)

Submits a 'best move' with the given move data.

void Thread_ScoreMoves (MoveData[] pMoves, SerializedChessInstance pPreMoveState, Cancellation
 —
 TokenSource pCancellationToken)

Invoked on a thread. Given an array of moves to score.

Protected Attributes

object m LockObject

The thread synchronization object.

CancellationTokenSource m_CancellationToken

The current cancellation token for the main thread.

List< MoveData > m_ValidMoves

The valid moves for the Al on the current turn.

Thread[] m_Threads

An array of threads used by the Al to calculate and submit moves.

 ConcurrentDictionary< int, ScoredValidMove > m_ScoredMoveLookup = new ConcurrentDictionary<int, ScoredValidMove>()

A concurrent queue where threads submit their scored moves. Key: int - The this-turn 'move index' the score is for (the index in the threaded list, not the main threads move list). Value: ScoredValidMove - The score of the move and the move data itself.

Properties

• boollsThinking [get, protected set]

Returns true if the AI is currently thinking about its move, otherwise false if not making a move or finished thinking.

• int MaxThreads = 4 [get, protected set]

The maximum # of threads the Al may use to calculate its next move.

5.1.1 Detailed Description

Guy chess Al.

Guy is a well balanced chess Al that takes as much time as he is allowed to carefully consider each move and it's consequences further in the game. Guys difficulty scales with allowed think time and allowed think depth. Guy may think on up to the hardware limit of threads or 'MaxThreads' threads at a time.

5.1.2 Constructor & Destructor Documentation

5.1.2.1 GuyChessAl()

The constructor for GuyChessAI.

Parameters

pTeam	The team the AI is playing as.
-------	--------------------------------

5.1.3 Member Function Documentation

5.1.3.1 CalculateMoveScore()

Gets the single-move score if the move described by pMoveData if played on the chess engine Instance, pInstance.

Parameters

plnstance	
pMoveData	
pCancellationToken	A reference to a cancellation token that tracks whether or not move score calculation should be cancelled.

Returns

The score of the move pMoveData if played in the chess instance pInstance.

5.1.3.2 OnBestMoveRequested()

```
override void ChessEngine.AI.Guy.GuyChessAI.OnBestMoveRequested ( int \ p{\it MaxDepth,} \\ float \ p{\it MaxTime} \ )
```

Invoked when a best move is requested.

12 Class Documentation

Parameters

pMaxDepth	
pMaxTime	

5.1.3.3 OnBestMoveSubmitted()

```
override void ChessEngine.AI.Guy.GuyChessAI.OnBestMoveSubmitted ( {\tt TileIndex}\ pFrom, {\tt TileIndex}\ pTo\ )
```

Invoked after the AI submits a best move.

Parameters

pFrom	
рТо	

5.1.3.4 SubmitBestMove()

```
void ChessEngine.AI.Guy.GuyChessAI.SubmitBestMove ( {\tt MoveData}\ p{\tt MoveData}\ )\ [{\tt protected}]
```

Submits a 'best move' with the given move data.

Parameters

```
pMoveData
```

5.1.3.5 Thread_ScoreMoves()

Invoked on a thread. Given an array of moves to score.

Parameters

pMoves	
pPreMoveState	
pCancellationToken	

The documentation for this class was generated from the following file:

· GuyChessAl.cs

5.2 ChessEngine.Al.Guy.GuyChessAl.ScoredValidMove Class Reference

A scored valid move.

Public Attributes

· float score

The score for the move.

MoveData moveData

The data that describes the move.

5.2.1 Detailed Description

A scored valid move.

The documentation for this class was generated from the following file:

· GuyChessAl.cs

5.3 ChessEngine.Al.Guy.GuyChessAl.SubmoveEntry Class Reference

Holds information about submoves at any depth.

Public Attributes

int validMoveIndex

The index of the move that is valid this turn for the Al in the 'valid moves' array.

· float cumulativeScore

The cumulative score from 'valid moves' entry at 'validMoveIndex' to and including this move.

SerializedChessInstance postMoveState

The state of the board after the move.

5.3.1 Detailed Description

Holds information about submoves at any depth.

The documentation for this class was generated from the following file:

GuyChessAl.cs

14 Class Documentation

5.4 ChessEngine.Al.Guy.GuyChessAl.ValidMoveEntry Class Reference

Holds information about valid moves and attacks that may be made this turn.

Public Attributes

• SerializedChessInstance preMoveState

The state of the board before the move.

· MoveData moveData

The data for the valid move.

List < SubmoveEntry > submoveEntries

A list of SubMoveEntrys that are overridden every frame while a best move is being considered. This ensures that only the most recent scoring data is considered

5.4.1 Detailed Description

Holds information about valid moves and attacks that may be made this turn.

The documentation for this class was generated from the following file:

· GuyChessAl.cs
